

JOB PROFILE

AIRPORT LINK, BRISBANE

CONNECTING SITE TEAMS

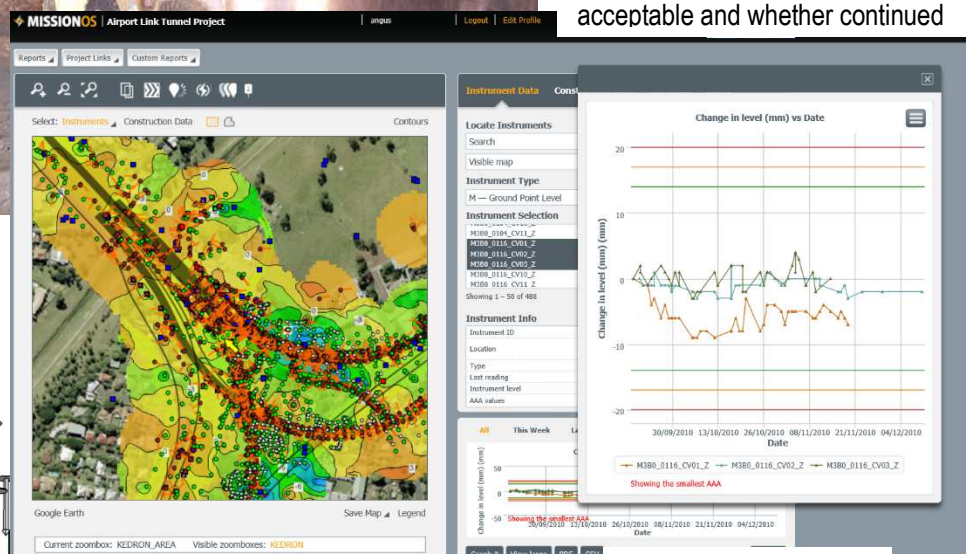

Maxwell Geosystems recognize that it is not just delivering the software that leads to a successful project but our commitment to work with the Brisbane Airport Link's hundreds of staff ensured that the systems address their particular needs.

Maxwell Geosystems develops all our software in house and this means no dependency on third party middleware and no waiting for the next release to get the solutions you need. We have always given our clients the benefit of all improvements to the systems as part of the service.

Interactive contouring, sectioning and geostatistics

The Mission OS was used on Brisbane's Airport Link as the key repository for all instrumentation data. This formed the cornerstone of the PTT (Permit to Tunnel) meetings attended by the Geotechnical and Tunnel engineers at which the days tunneling issues and constraints were discussed. Key to this was the assessment of whether current settlement were acceptable and whether continued

Automated 3D BIM generation
